Helical Gear Limited Slip Differential Case

for GM 8.6" Rear Axle

AAM Part #40135974

Our helical gear designed limited slip differential provides many traction-enhancing capabilities under most driving conditions, especially for vehicles equipped with traction and stability control systems.

The TracRite® GT technology used in this 8.6" axle differential case is the same used in the 11.5" limited slip rear axle in the RAM since 2003.

With helical gears, there are no clutch plates to wear and no friction additives are need.

The TracRite® GT provides maximum torque bias without causing a shudder in turns. The TracRite® GT torque bias is proportional to

the throttle, providing smooth application of torque to the wheels.

This differential case fits GM brand trucks and vans from 1999 to 2016 with an 8.6" ring and pinion gear. Vehicles include: Silverado, Avalanche, Sierra, Tahoe, Suburban, Escalade, Colorado, Canyon, Trailblazer, Savana, Express Van.

It is compatible with all ratios – 3.08, 3.23, 3.42, 3.73, 4.10, and 4.56.

Also available are the bearing kits needed for proper replacement of the differential case and ring and pinion gear set.

Every AAM part is precisely machined and assembled to fit right and perform right—that means easier installs, fewer comebacks and happier customers.
